

Agenda:

- Administrative
 - Approval of agenda – (ASSAP-WP09 -01)
 - Review and acceptance of previous minute -- (ASSAP-WP09 -02)
- MOPS Recap
 - MOPS schedule - (ASSAP-WP08-06)
 - MOPS status - (ASSAP-WP09-09)
- Review MOPS Outline (ASSAP-WP09-08) & Writing Assignment (ASSAP-WP08-04)
 - Report status on each section, provide outline of plan
 - Modify outline as necessary

Time permitting:

- Review draft papers from CDTI SG
 - CDTI& Traffic Applications (ASSAP-WP09-04)
 - CDTI Symbol Set Rules (ASSAP-WP09-05)
- New Issue: The current GPS sensors do not output a 95% uncertainty figure of merit for horizontal velocity (future WAAS GSPS sensor may optionally provide this). STP has requirements to derive a HEVU, VEVU which are 95% uncertainty estimates based on source; these are encoded into NACv prior to transmission. However, the NACv and NUCr are typically set to unknown (i.e., 0) in existing equipments. How should ASSAP deal with this? How will this affect availability of applications that require a min NACv?
- Introduce draft SBS SRMD PHA for review (ASSAP-WP09-07), e.g. look at Hazard H44.
