# Objective

- To determine the worst-case DME/TACAN interference scenario
  - TODAY
    - Operational DME/TACAN stations only
    - Aircraft at 15,000 and 40,000 ft
  - YEAR 2015
    - 978 MHz (17X) is cleared
    - All planned DME/TACAN stations are operational
    - Location of mobile TACAN in Germany is subject to 8-dB D/U rule
    - Aircraft at 15,000 and 40,000 ft

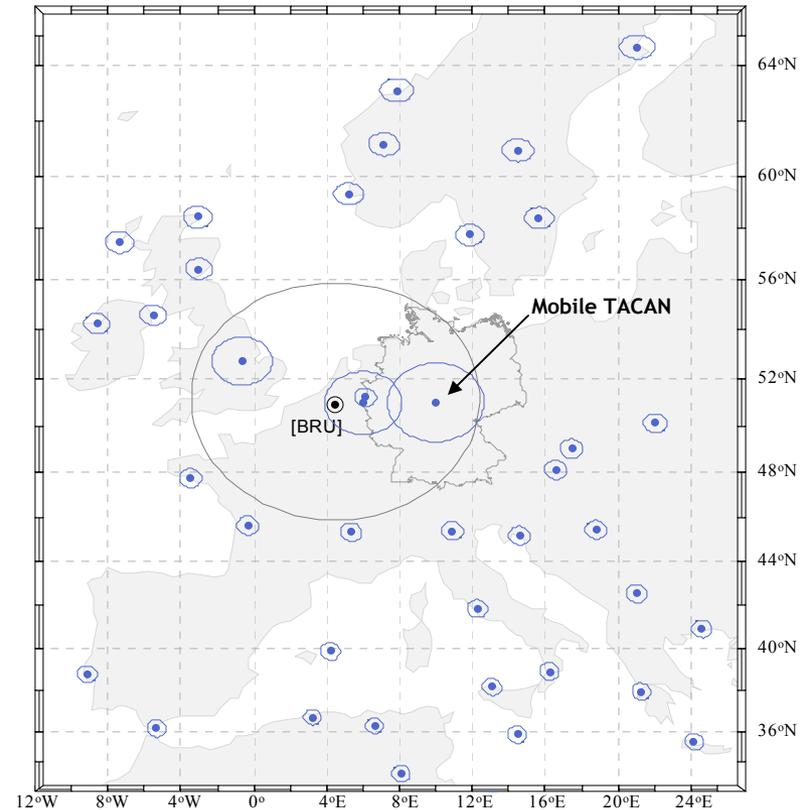

# European DME/TACAN Environment

Today

Year 2015

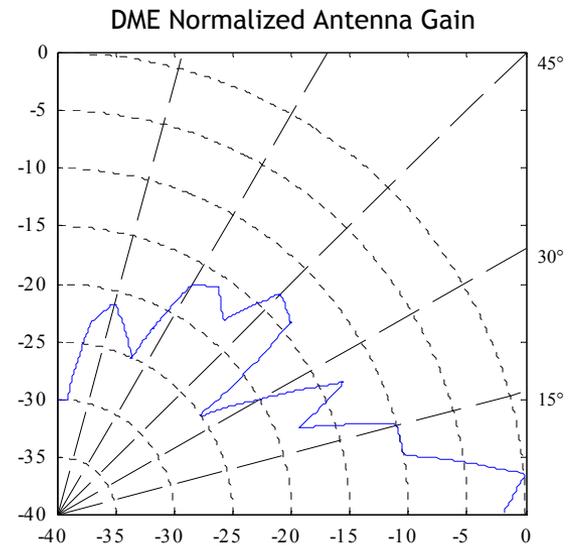

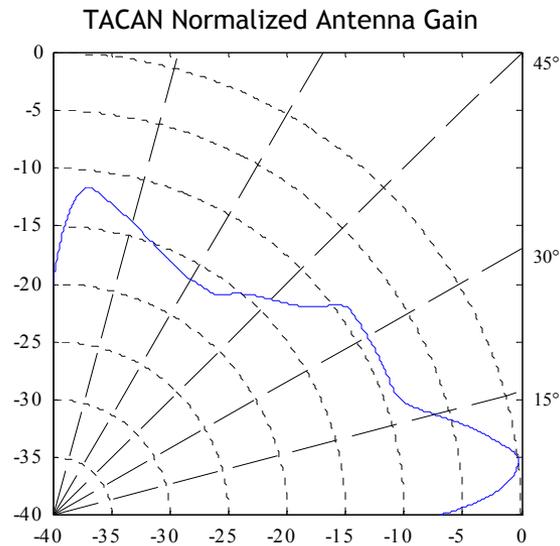

Shown above are DME and TACAN stations and their service areas, as listed in the available databases.

- 979 MHz
- 978 MHz

# Antenna Patterns

- DME and TACAN station antenna patterns are assumed to be directional in elevation as shown below

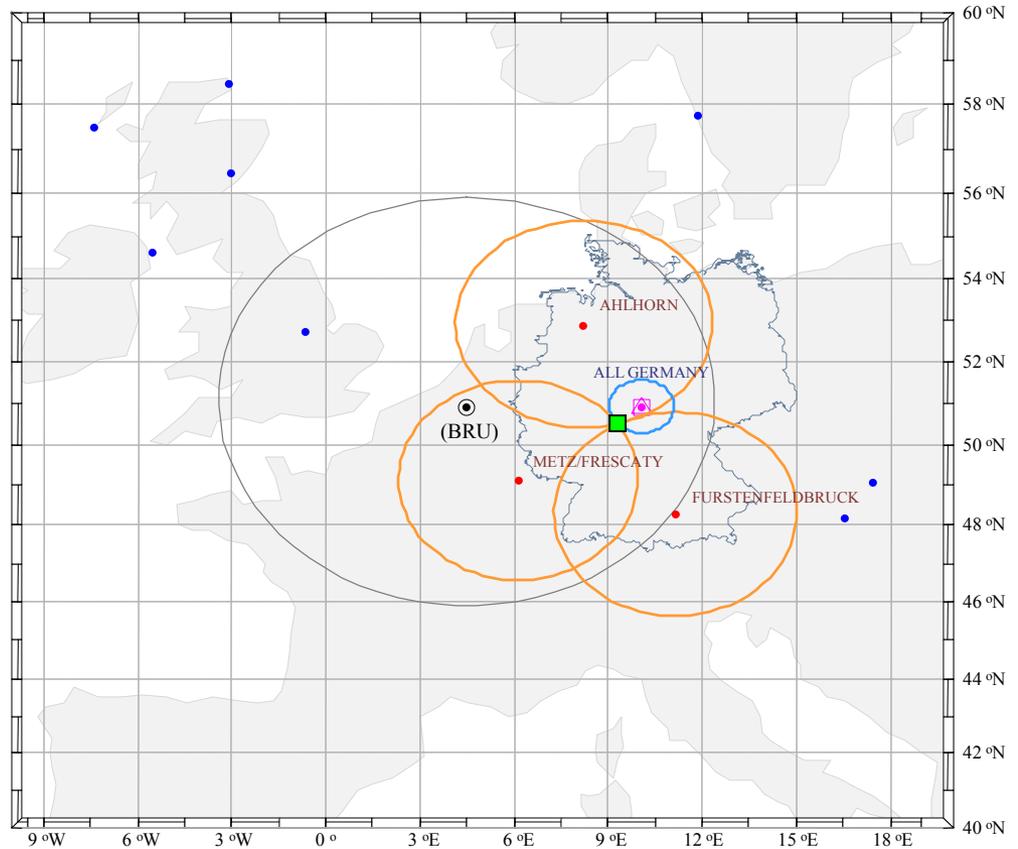

# Example

- Aircraft at  $(Lon, Lat, Alt) = (9.3^\circ E, 50.5^\circ N, 40,000 \text{ ft})$

DME/TACAN	Rec. Power (dBm)
AHLHORN	-73.7
FURSTENFELDBRUCK	-74.2
METZ/FRESCATY	-73.8
ALL_GERMANY	-61.2

X and Y refer to displacement from Brussels International Airport (BRU) in units of nautical miles (nmi).

All power levels are in units of dBm.
